DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 21 December 2007 has been entered.

Response to Arguments

2. Applicant's arguments, see pages 7-11, filed 21 December 2007, with respect to the rejections of the claims under 35 U.S.C. § 103(a) have been fully considered and are persuasive. The rejections of the claims under 35 U.S.C. § 103(a) set forth in the previous office action mailed 21 September 2007 have been withdrawn. Applicant's present amendments to the claims distinguishes over the previously cited prior art references. Furthermore, Examiner has not discovered any additional prior art which anticipates the claims and/or renders the claims obvious to one of ordinary skill in the art at the time of the invention.

Allowable Subject Matter

3. **Claims 1-14 and 86 are allowed.**

The following is an examiner's statement of reasons for allowance:

Claims 1 and 86 recite a system and an apparatus, respectively, that corrects for line deviations based on the spacing between the plurality of photoelectric conversion element arrays, and for the spatial positional deviations of the individual pixel signals formed for the plurality of colors. All of the photoelectric conversion elements are contained on a single chip. The line deviations and spatial positional deviations are stored and used to correct the sensed image data. Examiner has not found this particular combination of features in the prior art. Claims 1 and 86 have the advantage of correcting for both the positional inaccuracies between arrays on the chip and the smaller positional inaccuracies between the individually detected pixels through stored correction data. The closest prior art found is the combination of references cited in the previous office action, namely Orito (USPN 6,072,912), Taguchi (USPN 5,771,106), and Sugiura (USPN 4,679,074), which do not teach the smaller positional inaccuracies between the individually detected pixels. Thus, claims 1 and 86 are deemed allowable.

Art Unit: 2625

Claims 2-14 depend ultimately from claim 1, and thus incorporate the limitations recited therein. Therefore, claims 2-14 are deemed allowable at least due to their respective dependencies.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
